Efficiency: 55
Made of:
Chimney diameter, mm:
Item type:
Warranty, year: 3
Capacity of stones, kg: 35
Saunos tūris, m3: 10

Description

The wood-burning stove is designed for small-volume saunas. This stove is also perfect for barrel-type saunas and is used by many of our customers, manufacturers of such saunas. This type of stove has a large amount of stones compared to their size, resulting in a smooth and gentle steam.

The combustion chamber of the stove is made in such a way as to use the energy given off by firewood as efficiently as possible. Installing additional air ducts in the stove creates an efficient combustion process that generates more energy from the same amount of firewood. In this way, nature is less polluted, because the energy obtained from firewood is burned and not removed through the chimney. Due to the design of the combustion chamber and thicker metal, the stoves are more durable.

Grannus – 8 has a front door glass that will allow you to admire the burning fire while you warm up in the sauna. A chimney-mounted water tank for hot water can also be installed on this type of stove.
